

Programmable Controller CQM1(H)

Replacement Guide From CQM1(H) to CJ2M

CQM1H-CPU□1

CJ2M-CPU

Replace Guide

P087-E1-01

About this document

This document provides the reference information for replacing CQM1H PLC systems with CJ2M series PLC.

This document does not include precautions and reminders; please read and understand the important precautions and reminders described on the manuals of PLCs (both of PLC used in the existing system and PLC you will use to replace the existing PLC) before attempting to start operation.

Terms and Conditions Agreement

Read and understand this catalog.

Please read and understand this catalog before purchasing the products. Please consult your OMRON representative if you have any questions or comments.

Warranties.

(a) Exclusive Warranty. Omron's exclusive warranty is that the Products will be free from defects in materials and workmanship for a period of twelve months from the date of sale by Omron (or such other period expressed in writing by Omron). Omron disclaims all other warranties, express or implied.

(b) Limitations. OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, ABOUT NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OF THE PRODUCTS. BUYER ACKNOWLEDGES THAT IT ALONE HAS DETERMINED THAT THE PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE. Omron further disclaims all warranties and responsibility of any type for claims or expenses based on infringement by the Products or otherwise of any intellectual property right.

(c) Buyer Remedy. Omron's sole obligation hereunder shall be, at Omron's election, to (i) replace (in the form originally shipped with Buyer responsible for labor charges for removal or replacement thereof) the non-complying Product, (ii) repair the non-complying Product, or (iii) repay or credit Buyer an amount equal to the purchase price of the non-complying Product; provided that in no event shall Omron be responsible for warranty, repair, indemnity or any other claims or expenses regarding the Products unless Omron's analysis confirms that the Products were properly handled, stored, installed and maintained and not subject to contamination, abuse, misuse or inappropriate modification. Return of any Products by Buyer must be approved in writing by Omron before shipment. Omron Companies shall not be liable for the suitability or unsuitability or the results from the use of Products in combination with any electrical or electronic components, circuits, system assemblies or any other materials or substances or environments. Any advice, recommendations or information given orally or in writing, are not to be construed as an amendment or addition to the above warranty.

See http://www.omron.com/global/ or contact your Omron representative for published information.

Limitation on Liability; Etc.

OMRON COMPANIES SHALL NOT BE LIABLE FOR SPECIAL, INDIRECT, INCIDENTAL, OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS OR PRODUCTION OR COMMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED IN CONTRACT, WARRANTY, NEGLIGENCE OR STRICT LIABILITY.

Further, in no event shall liability of Omron Companies exceed the individual price of the Product on which liability is asserted.

Suitability of Use.

Omron Companies shall not be responsible for conformity with any standards, codes or regulations which apply to the combination of the Product in the Buyer's application or use of the Product. At Buyer's request, Omron will provide applicable third party certification documents identifying ratings

and limitations of use which apply to the Product. This information by itself is not sufficient for a complete determination of the suitability of the Product in combination with the end product, machine, system, or other application or use. Buyer shall be solely responsible for determining appropriateness of the particular Product with respect to Buyer's application, product or system. Buyer shall take application responsibility in all cases.

NEVER USE THE PRODUCT FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY OR IN LARGE QUANTITIES WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON PRODUCT(S) IS PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

Programmable Products.

Omron Companies shall not be responsible for the user's programming of a programmable Product, or any consequence thereof.

Performance Data.

Data presented in Omron Company websites, catalogs and other materials is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of Omron's test conditions, and the user must correlate it to actual application requirements. Actual performance is subject to the Omron's Warranty and Limitations of Liability.

Change in Specifications.

Product specifications and accessories may be changed at any time based on improvements and other reasons. It is our practice to change part numbers when published ratings or features are changed, or when significant construction changes are made. However, some specifications of the Product may be changed without any notice. When in doubt, special part numbers may be assigned to fix or establish key specifications for your application. Please consult with your Omron's representative at any time to confirm actual specifications of purchased Product.

Errors and Omissions.

Information presented by Omron Companies has been checked and is believed to be accurate; however, no responsibility is assumed for clerical, typographical or proofreading errors or omissions.

Table of Contents

This replacement guide describes the procedure to rebuild the system which uses the CQM1H-series PLC by introducing the CJ2M-series PLC instead. The CJ2M-series has functions which can replace the functions and operation of CQM1H-series PLC. Take the below work flow to replace your system. Also, refer to the reference pages for details.

2) Actual replacement work: Take the steps below to replace the CQM1(H) to CJ2M.

	Description	Reference pages
♦ Replacing Units	Install the prepared Units instead of C200H Units. *Refer to the <i>CJ2H-CPU6[](-EIP), CJ2M-CPU[][] CPU Unit</i> <i>Hardware User's Manual (Cat. No. W472)</i> and User's manual for Special I/O Units for details about installation.	
Wiring	Wiring for the installed Units. *Refer to the CJ2H-CPU6[](-EIP), CJ2M-CPU[][] CPU Unit Hardware User's Manual (Cat. No. W472) and User's manual for Special I/O Units for details about wiring.	Table.6 Related Manuals
Writing the data to CJ2M	Transfer the converted data to CJ2M. To check the wiring, operate Input/Output to see if they operate correctly.	5. Writing the data to CJ2M
↓ Checking operation	Turn ON the power and check the operation.	
Replacement completion	 If production is conducted between uploading the program work, data handled by the program may change. If so, upl replacement work, modify data (if necessary), and download 	oad the data right before the
	2. The cycle time of CQM1(H) and CJ2M are different,	

operation. If so, it is necessary to adjust cycle time from the PLC settings.

1. Performance specifications

1.1 CQM1H/CJ2M specifications comparison

The table below lists the major difference in specifications of the CQM1H series and CJ2M series.

N 1 1 1	tem	CQM1H-CPU11/21/51/61	CJ2M-CPU**
Number of I/O points		CPU11/21: 256 points	2,560 points
		CPU51/61: 512 points	
Program capacity		Note1.	Note1.
		CPU11/21: 3.2k words	CPU*1: 5k step
		CPU51: 7.2k words	CPU*2: 10k step
		CPU61: 15.2k words	CPU*3: 20k step
			CPU*4: 30k step
			CPU*5: 60k step
Data memory		CPU11/21: 3.k words (DM)	32k words
		CPU51: 6k words (DM)	EM
		CPU61: 12k words (DM + EM)	
			CPU*1 to *3: 1 bank (32k)
			CPU*4 to *5: 4 banks (32k x 4)
Built-in I/O		In:16 points	Built-in CPU funciton will be available by
			adding the CJ2M-MD211/CJ2M-MD212
			Up to two units can be mounted.

Note1. One word of CQM1H corresponds to one step of CJ2M. For instance, replacement model of CQM1H-CPU51 (7.2k word) is CJ2M-CPU*2 (10k step), since the program capacity of 7.2k step or larger is required for replacement. Note that the number of steps for an instruction might be different in CQM1H and CJ2M.

< Example > TIM instruction: CQM1H: 2 word/CJ2M: 3 step

2. System Configurations

2.1 CQM1H/CJ2M system configuration comparison

This section describes the CJ2M series units which can be used instead of the CQM1H series units.

Functions which have been supported by the CQM1H series unit can be generally supported by the CJ2M series unit. However, there are some differences in usage, connecting method with external devices, and input/output specifications. Please check if the CJ series unit can be used instead of the CQM1H units, by referring to the user's manuals of both series.

3. Memory area

3.1 CQM1H/CJ2M memory area comparison

The difference of the memory area of the CQM1H series and CJ2M series is shown using an example of CQM1H-CPU61 and CJ2M-CPU**.

♦CIO area

CQM1H-CPU61 CJ2M-CPU** IR000 0000 I/O Area Input Area IR015 IR016 Work area IR089 IR090 Controller Link Status Area IR095 IR096 MACRO operand Input area IR099 IR100 Output area IR115 Work area 0159 IR116 0160 Not used IR189 IR190 Controller Link Status Area 2 IR195 IR196 MACRO operand Output area IR199 IR200 Inner Board slot 1 area IR215 IR216 Work area IR219 IR220 Inner board relay Analog settings area IR223 IR224 Work area IR229 IR230 High-speed Counter 0 PV IR231 IR232 Inner Board slot 2 area IR243 SR244 SR area SR255 0999 1000 Data Link Area 1199 1200 Not used 1299 1300 Internal I/O Area 1499 1500 **CPU Bus Unit Area** 1899 1900 Not used 1999 2000 Special I/O Unit Area 2959 2960 Pulse I/O Area 2963 2964 Not used 3099 3100 Serial PLC Link Area 3189 3190 Not used 3199 3200 **DeviceNet Area** 3799 3800 Internal I/O Area 6143

Area other than CIO Area

4. I/O Area Allocation

This section explains the difference of I/O area allocation in CQM1H, CJ2M series.

♦ Unit Area Allocation for CQM1H

The I/O words are allocated to I/O Units and Dedicated I/O Units in the order of the unit mounting position from the left to right.

The input relays uses the area starting with IR000 (16 inputs on the CPU Unit always use IR000; other Input Units uses area starting with IR001). The output relays uses area starting with IR100.

Unit	Input relay	Output relay
16 inputs built into CPU Unit	Always allocated to IR 000.	-
Input Units or Dedicated I/O	Allocated to the area starting	-
Units which uses input relay	with IR001. Allocation in the	
area	order of unit mounting position.	
Output Units or Dedicated I/O	-	Allocated to the area starting
Units which uses output relay		with IR100. Allocation in the
area		order of unit mounting position.

♦ Unit Area Allocation for CJ2M

There are three unit types. The unit area allocation method is different in each group.

Unit	Allocation	Notes
Basic I/O Unit	0000 to 0159CH Allocated in the unit of 16 inputs/outputs based on the actually connected unit position	set the starting address for the
Special I/O Unit	2000 to 2959CH Uses 10 words for each unit. Allocated according to the Unit No.	-
CPU Bus Unit	1500 to 1899CH Uses 25 words for each unit. Allocated according to the Unit No	-

When I/O Area is used in the ladder program, change the CIO area and bit address using the "Change All" or "Replace" functions of CX-Programmer.

Note1: Unit area allocation same as CQM1H can be configured for CJ2M system, by setting the start address for each unit using CX-Programmer Ver.9.1 or later (For some systems, same allocation can not be made). It will reduce CIO area used for Basic I/O Units which must be changed, thus reducing work hour for modifying ladder program.

5. Instructions

The instruction specification is different in CQM1H series and CJ2M series. The Appendix explains the difference in operand and flags. Refer to the Appendix for details.

·A-1 Instruction operations

Explains difference in instructions and operand. Least necessary adjustment after program conversion on the CX-Programmer.

·A-2 Condition flag operations

Explains difference concerning the operation of condition flags at each instruction execution.

5.1 High-speed counter/pulse output instruction

This section describes the difference of High-speed counter/pulse output instruction and explains the difference of pulse functions in CQM1H-PLB21 and CJ2M-CPU**

♦MOD	E CONTROL (I	NI)

		1 Hex: CCW
		D03 to D00= Relative/absolute specifier
		0 Hex: Relative pulses
		1 Hex: Absolute pulses
Operand3	First control word:	First word of settings table:
	[C] Acceleration rate	[S1] Acceleration rate = 0001 to FFFF Hex
	= 0001 to 0200 [C+1] Target frequency	[S1+1] Deceleration rate= 0001 to FFFF Hex [S1+2] Lower word with target frequency
	= 0010 to 5000	[S1+2] Lower word with target frequency
	[C+2] Lower word with number	00000000 to 000186A0 Hex
	of pulses that will be output	[S1+4] Lower word with number of output pulses
	[C+3] Upper word with number	[S1+5] Upper word with number of output pulses
	of pulses that will be output	00000000 to 7FFFFFF Hex(Relative pulses)
	00000001 to 16777215	80000000 to 7FFFFFF Hex (Absolute pulses)
Operand4	-	First word of starting frequency:
		[S2] Lower word with starting frequency: 00000000
		[S2+1] Upper word with starting frequency:
		000186A0Hex max.

◆PULSE WITH VARIABLE DUTY FACTOR (PWM)

	CQM1H	CJ2M
Operand 1	Communications Port: 001=PLB Pulse Output1 002=PLB Pulse Output 2	Port specifier: #0000= PWM output 0 (Frequency unit of 0.1Hz, Duty factor unit of 1%) #0001=PWM output 1 (Frequency unit of 0.1Hz, Duty factor unit of 1%) #0002=PWM output 2 (Frequency unit of 0.1Hz, Duty factor unit of 1%) #0003=PWM output 3 (Frequency unit of 0.1Hz, Duty factor unit of 1%) #1000=PWM output 0 (Frequency unit of 0.1Hz, Duty factor unit of 0.1%) #1001=PWM output1 (Frequency unit of 0.1Hz, Duty factor unit of 0.1%) #1002=PWM output2 (Frequency unit of 0.1Hz, Duty factor unit of 0.1%) #1003=PWM output3 (Frequency unit of 0.1Hz, Duty factor unit of 0.1%) #1003=PWM output 3 (Frequency unit of 0.1Hz, Duty factor unit of 0.1%) #1100=PWM output 0 (Frequency unit of 1Hz, Duty factor unit of 0.1%) #1101=PWM output 1 (Frequency unit of 1Hz, Duty factor unit of 0.1%) #1102=PWM output 2 (Frequency unit of 1Hz, Duty factor unit of 0.1%) #1102=PWM output 3 (Frequency unit of 1Hz, Duty factor unit of 0.1%) #1103=PWM output 3 (Frequency unit of 1Hz, Duty factor unit of 0.1%)
Operand 2	Frequency: 000= 5.9kHz 001= 1.5kHz 002= 91.6Hz	 Frequency: 0001 to FFFFHex (0.1Hz to 6553.5Hz, Frequency unit of 0.1Hz) 0001 to 8020Hex (1Hz to 32800Hz, Frequency unit of 1Hz) * The ccuracy of PWM wave guaranteed is limited to the range between 0.1 to 1000.0Hz, due to limitation of output circuit. Output accuracy: ON duty +2%, -0% (With 1kHz, 0.5mA output) * The ccuracy of PWM wave guaranteed is limited to the range between 0.1 to 1000.0Hz, due to limitation of output circuit. Output accuracy: ON duty +2%, -0% (With 1kHz, 0.5mA output)
Operand 3	Duty factor: 0001 to 0099 (1 to 99%)	Duty factor: 0000 to 0064Hex (0 to 100%) 0000 to 03E8Hex (0 to 100%)

5.2 I/O instructions

I/O instructions corresponds to the convenient instructions of CQM1H have been added for CJ2M CPU Unit. A part of specifications of those instructions are different; refer to the table below for details of difference in Operands. The execution time of each instruction is also different; be sure to check the operation for system safery.

◆DIGITAL SWITCH INPUT (DSW)

	CQM1H	CJ2M
Operand1	Input word:	Input word (Data line inputs(D0 to D3)
	D7 to D4:Leftmots 4 digits	D7 to D4: Rightmost 4 digits
	D3 to D0:Rightmost 4 digits	D3 to D0:Leftmost 4 digits
Operand2	Output word:	Output word (CS/RD control signal outputs)
	D5: One round flag	D5: One round flag
	D4:RD (read) signal (RD0)	D4: RD0 Read signal
	D3 to D0:CS signal (CS3 to CS0)	D3 to D0:CS signals (CS3 to CS0)
Operand3	First register word:	First Result Word:
	[R1]: Least significant digits (4 digits)	D15 to D12: Digit 4
	[R1+1]:Most significant digits (4 digits)	D11 to D08: Digit 3
		D07 to D04: Digit 2
		D03 to D00: Digit 1
Operand4	-	Number of digits:
		[C] #0000: 4 digits
		#0001: 8 digits
		[C+1] System word

Other information

	CQM1H	CJ2M
Limitations in number of time used.	Once in one program	No limitations
Settings for Number of digits	Set in PC Setup DM6639. 00 (Default) :4 digits, 01: 8 digits	Set in Operand 4.
ER flag operation	 Content of *DM/*EM word is not BCD, or the Em/DM area boundary has been exceeded. (EM can be used with CQM1H-CPU61 only.) R and R+1 are not in the same data area. (When the CQM1H is set to receive 8-digit data.) Other than above, ER flag is OFF. 	OFF (ER flag does not turn ON with left errors, since they are handled as Illegal access error).
Fun No.	87(Expansion instructions)	210

♦ TEN KEY INPUT (TKY)

	CQM1H	CJ2M
Operand1	Input word:	Input word (Data line inputs):
	D09 to D00:	D09 to D00:
	Bit00 to 09 works as ten keys (0 to 9).	Bit00 to 09 works as ten keys (0 to 9).
Operand2	First register word:	First register word :
	[D1]: Least significant 4 digits	[D1]D15 to D12: Digit 4
	[D1+1]: Most significant 4 digits	D11 to D08: Digit 3
		D07 to D04: Digit 2
		D03 to D00: Digit 1
		[D1+1]D15 to D12: Digit 8
		D11 to D08: Digit 7
		D07 to D04: Digit 6
		D03 to D00: Digit 5
Operand3	Key input word:	Key input word:
	D10: ON when any key is pressed.	D10: ON when any key is pressed.
	D09 to D00: ON when the corresponding	D09 to D00: ON when the corresponding
	key is pressed.	key is pressed.
	(Remains on until another key is pressed.)	(Remains on until another key is pressed.)

Other information

	CQM1H	CJ2M
Limitations in number of time used.	Can be used twice or more times; however, input word address must be changed.	None
ER flag operation	 Content of *DM/*EM word is not BCD, or the Em/DM area boundary has been exceeded. (EM can be used with CQM1H-CPU61 only.) D and D+1 are not in the same data area. Other than above, ER flag is OFF. 	OFF (ER flag does not turn ON with left errors, since they are handled as Illegal access error).
Fun No.	18 (Expansion instructions)	211
♦ HEXADECIMAL KEY INPUT (HKY)

	CQM1H	CJ2M
Operand 1	Input word:	Input word (Data line D0 to D3 inputs): D03 to D00: Bits 00 to 03 correspond to Input Unit inputs 0 to 3.
Operand 2	Control signal output word: D03 to D00:16 key selection control signal	Output word (Selection signal output): D03 to D00: Bits 00 to 03 corespond to Output Unit outputs 0 to 3.
Operand 3	First register word: [D1]: Least significant 4 digits [D1+1]: Most significant 4 digits [D1+2]: ON when the corresponding key is pressed. (Remains on until another key is pressed.)	First register word: [D1]]D15 to D12: Digit 4 D11 to D08: Digit 3 D07 to D04: Digit 2 D03 to D00:Digit 1 [D1+1]D15 to D12: Digit 8 D11 to D08: Digit 7 D07 to D04: Digit 6 D03 to D00: Digit 5 [D1+2]D15 to D00: ON when the corresponding key is pressed. (Remains on until another key is pressed.)
Operand 4	-	System word:

Other infotmation

	CQM1H	CJ2M
Limitations in number of time used.	Once in one program	No limitations
ER flag operation	 Content of *DM/*EM word is not BCD, or the EM/DM area boundary has been exceeded. (EM can be used with CQM1H-CPU61 only.) R and R+1 are not in the same data area. Other than above, ER flag is OFF. 	OFF (ER flag does not turn ON with left errors, since they are handled as Illegal access error).
Fun No.	(Expansion instruction)	212

Other information

	CQM1H	CJ2M
Limitations in number of time used.	Once in one program.	No limitations
ER flag operation	 Content of *DM/*EM word is not BCD, or the EM/DM area boundary has been exceeded. (EM can be used with CQM1H-CPU61 only.) S and S+1 are not in the same data area. (When set to display 8-digit data.) There is an error in operand settngs Other than above, ER flag is OFF. 	OFF (ER flag does not turn ON with left errors, since they are handled as Illegal access error).
Fun No.	88 (Expansion instruction)	214

5.3 Model conversion instructions

The model conversion instructions (below five instructions) which were added for CJ2M CPU Units in the same way as CQM1H series CPU Units.

Those instructions are automatically converterd by executing change model (from CQM1H to CJ2M) on the CX-Programmer Ver.5 or later.

Be sure to check the operation, since operation specifications including instruction execution time might differ.

Instructions	Model conversion instruction (CJ2M CPU Units)	Corresponding instruction for CQM1H
BLOCK TRANSFER	XFERC (565)	XFER (70)
SINGLE WORD DISTRIBUTE	DISTC (566)	DIST (80)
hDATA COLLECT	COLLC (567)	COLL (81)
MOVE BIT	MOVBC (568)	MOVB (82)
BIT COUNTER	BCNTC (621)	BCNT (67)

6. Example of converting ladder program by CX-Programmer

This section explains the method of converting the ladder program using CX-Programmer V9.1. Here, convert the ladder program of CQM1H-CPU61 for CJ2M-CPU^{**} as an example. (This section describes the procedure from loading the ladder program created by CX-Programmer or Sysmac Support Soft (SSS) to converting the program for CJ2M.)

After converting the ladder program, it is necessary to modify the unit area allocation, operand data, and condition flag settings, separately. Be sure to confirm the system safety before starting operation.

♦ Reading the ladder program of CQM1H

· SSS data

On the CX-Programmer, select File – Open. Set the file type to "SSS Ladder Program (*.SP1)" and open the SSS ladder program file for CQM1H. On the below dialog, Click the "Open".

Open CX-Pr	ogrammer Project			? 🛛
Look in: ा) demo	•	🕁 🔁	r 📰 🕈
CQM1H ss	s.sp1			
File name:	CQM1H sss			Open
Files of type:	SSS Ladder Program (*.SP1)		•	Cancel

Then, dialog box to enter the model of CQM1 CPU Unit will be displayed. Enter the model of the CPU Unit. (For CQM1H, select corresponding CQM1 model.)

Select CPU	Гуре						
select the cor	The CPU type of this project is unknown. Please select the correct type to enable project						
conversion to	complete.	Cancel					
PLC	CPU						
CQM1	43 💌						

· CX-Programmer data

Click the "File" - "Open" and set the file type to CX-Programmer Project Files (*.cxp)". Then, open the ladder program file of CQM1H created on the CX-Programmer.

Open CX-Pr	ogrammer Project 🔹 💽 🔀
Look in: 隘	demo 💽 🗢 🛅 📰 -
CQM1H s	ample.cxp
File name:	CQM1H sample.cxp Open
Files of tupo:	
Files of type:	CX-Programmer project file (*.cxp) Cancel

♦ Changing model from CQM1H to CJ2M.

As shown on the below figure, select NewPLC1[CQM1H] and right-click or double click it to change the PLC model. Please set the CPU model to the Device Type.

The error report might be displayed if there are instructions which cannot be converted.

Please correct and modify the program using support software function or manually, and execute program check. If errors are detected by the program check, please correct them referring to the error report.

Checking program

Check whether there is problem in the ladder program which was converted from the CQM1H series for CJ2M series.

■ Program check

There are 2 types of program check; automatic check on the CX-Programmer and check conducted by users. CX-Programmer checks the program when "Change model" is executed and the ledder program is converted.

• Automatic program check on the CX-Programmer

Timing of program check	Description
When PLC model is changed.	Program check for each PLC model
	Check for all instructions and all operands.

You can see the check result on the "Compile (Program check)" tab of the Output Window. The left bus-bar on the ladder section window turns red if there is an error in the rung.

• Program check conducted by users

This section describes the procedure of program check, an example of checking result, and explanation of error levels.

<Program check for one program (task)>

- 1. Select the ladder section window or nimonic window to check.
- 2. Select "Program" "Compile (Program check)".

The results of program check will be displayed on the Output Window. Refer to "Results of program check" on the next page for details.

• Checking the entire program

Select "PLC" – "Compile All PLC Programs". You can see the program check results on the Output Window. Refer to "Results of program check" for details.

<Results of program check>

You can see the check result on the "Compile (Program check)" tab of the Output Window. There are three error levels; errors are divided and shown for each level.

When there is no error.

------PLC: 'NewPLC1' (PLC Model 'CQM1H CPU11' to 'CJ2M CPU11') ------Conversion issues... [PLC/Program Name : Programs/NewProgram1] [Ladder Section Name : Section1] [Ladder Section Name : END] NewPLC1 - 0 errors, 0 warnings.

When there are errors.

Compiling... [PLC/Program Name : NewPLC1/NewProgram1] [Ladder Section Name : Section1] ERROR: Element at rung 0 (0, 0) is not connected at its output. ERROR: Element at rung 0 (0, 1) is not connected at its output. ERROR: Missing operand at rung 1 (1, 0). ERROR: Missing operand at rung 1 (0, 0). [Ladder Section Name : END] NewProgram1 - 4 errors, 0 warnings. The programs have been checked with the program check option set to Unit Ver.1.0.

> Double-click an error on the Output Window to jump to the correposiding cell. Numeric data in (,) shows the position of a cell with an error.

If you right-click on the Output Window, below menus are shown.

Menu	Functions							
[Clear]	Clears the content of Output Window.							
	Same as selecting "Edit" – "Clear Compile Window".							
[Next Reference]	Jump to the error cell next to the error now selected.							
	Same as selecting "Edit" – "Next Reference".							
[Allow Docking]	Output Window is shown on the main window of the							
	CX-Programmer. If unckeck the check box, Output							
	Window will be shown on the separate window.							
[Hide]	Close the output window.							
	Same as selecting "View" – "Window" – "Output".							
[Float In Main Window]	Output window will be changed to other window (ex.							
	Ladder section window).

Appendix

A-2 Condition flag operations

Conversion: *** = same condition flag operation, ** = a part of condition flag operation differs, - = Different condition flag operation, None = no corresponding instruction Condition flags: Left of "/"= Operation of CQM1H. Right of "/"= Operation of CJ1M/CJ1G/CJ2M No "/" = Same operation in CQM1H and CJ *= ON/OFF depending on the instruction statuus
